Skool vir Klimaatstudie

Summer School 2027

Healthcare professionals are increasingly confronted with the health consequences of climate change in their daily practice. From heat-related illnesses and respiratory diseases to infectious disease outbreaks, mental health impacts, and disruptions to healthcare delivery, climate-related risks are becoming an integral part of clinical and public health decision making. At the same time, healthcare systems are facing growing pressure to strengthen resilience and reduce their own environmental footprint.

WHO SHOULD ATTEND:

This Summer School, in collaboration with the Climate Change, Migration and Health Network (CliMigHealth) affiliated to Ghent University, offers a unique opportunity for clinicians, public health practitioners, healthcare managers, educators, researchers, policymakers, and students to build the knowledge, skills, and networks needed to respond effectively to climate-related health challenges.

WHAT TO EXPECT:

- Climate-informed clinical practice and programmes
- Tools to improve climate resilience and emergency preparedness
- Designing pre- and in-service education
- Insights from expert-led sessions
- Interactive, practical workshops
- Networking opportunities
- Accredited for CPD points

WHEN: 2-4 March 2027

WHERE: BMRI Building, Faculty of Medicine & Health Sciences,
Stellenbosch University, Francie van Zijl Drive,
Parow, Cape Town, 7505, South Africa

R2 950

*Concessionary fee will be considered on application
